

Help Chattering Children provide testing and interventions to at least 30 at-risk children in Washington, DC.

Left untreated, hearing loss can have a devastating impact on a child's verbal, reading, motor and social skills.

Young children with hearing loss in Washington, DC are at risk of not receiving proper diagnostics and interventions that will ensure their healthy development due to a lack of access.

Please make a gift today!

Project Cost: \$13,000

Goal: To provide diagnostic testing for at least 30 children with hearing loss, and provide results reports and intervention plans to their families free-of-charge.

Location: Neighborhoods in Washington, DC with limited access to clinics and facilities for testing and follow-up intervention.

Chattering Children's clinicians specialize in audiology, child development, and auditory-verbal, speech-language and occupational therapies.

At Chattering Children, we know the best practices for treating hearing loss, the use of hearing aids and cochlear implants and how to teach families to care for a child with hearing loss so they can have the best possible outcomes.

Children with hearing loss can have poor literacy rates, limiting their academic achievement and future outcomes.
